

TO-220F Full molded Three Terminal Voltage Regulators

NJR offers medium and high powered three-terminal voltage regulators in the TO-220F package. It is interchangeable with the conventional JEDEC TO-220 package except that the radiation fin is encapsulated by resin leading to the following additional features:

- (a) Electrical isolation without an insulator
- (b) Better radiation characteristics than a conventional TO-220 package when used without an external heatsink
- (c) Higher reliability; the TO-220F has improved moisture resistance characteristics when compared to the conventional TO-220
